

Four front doors for Cedar Press

Where the landing page is today, and three directions for what it could become. The stills that follow don't move — **every concept is a working animated page** — so read each one's "what moves" line as part of the design.

Real totals only. Every figure is a published total; the site never sums anything itself.

Honest motion. Numbers flutter only when a release actually lands — never a fake ticker.

Stated cadence. "Figures updated weekly," dated — no pretense of a live feed.

\$176.7B

WHERE IT IS TODAY

The current door

The live site as it stands — the full page. Four collections up front, the intelligence-inside list, both no-subscription paths (tribal data requests and research access), and the team-experience strip. A clean, proven layout, but the page **describes** the value rather than showing it. This is the baseline the three directions are trying to beat.

CEDAR PRESS

Trusted intelligence for Indian Country.

The data behind Indian Country.

Original collections built from fragmented records, connected through original research, and maintained as Indian Country changes.

Original Collections

THE INTELLIGENCE INSIDE

FEDERAL FUNDING · FEDERAL REGISTER · LEGISLATION · DEALS · NAGPRA · LOBBYING · PRIME CONTRACTING · SUBCONTRACTING · NATURAL RESOURCES · NATIVE-OWNED BUSINESSES · NATIVE NONPROFITS

Not keyword filters: every collection is connected to the tribal governments, tribal enterprises, ANCs, NHOs and Native organizations it touches, with names, ownership and affiliations maintained over time.

Ask Cedar what Cedar Press can answer →

TEAM EXPERIENCE

 FEDERAL RESERVE BOARD · FEDERAL RESERVE BANK OF MINNEAPOLIS · FEDERAL RESERVE BANK OF PHILADELPHIA

 MIT · OXFORD · CORNELL · BROWN · DARTMOUTH · YALE

Institutional names reflect team members' professional or academic affiliations and do not imply institutional endorsement.

HOW CEDAR BUILDS ITS COLLECTIONS →

Cedar Press is available exclusively through Tribal Business News.

Cedar Press

The Ledger

Columns of **real records** — the Bowhead
FY2023 contract, the Yurok forestry award,
ONRR royalties, NAGPRA notices — drift slowly
behind one enormous figure that cycles through
the headline stats. A chip names each arrival
("+118 contract actions · just landed") and one
row in the wall lights up as the record arriving.
The feeling: **standing** at a window onto the
ledger itself.

The record wall drifts; the big figure rolls digit-by-digit every ~5s; arrival chips pulse in.

A curated “recent rows” feed per release — same publishable-rows discipline as the data samples.

The wall must stay quiet or it fights the figure; opacity tuning is the whole game.

DIRECTION B

The Constellation

RECOMMENDED

The product’s core claim is entity resolution, so the hero **is the graph**: hub nodes are nations and corporations, small nodes are businesses and records, and a pulse traveling down an edge is a record being connected. Each pulse writes a plain-language line into the side ticker (“BOWHEAD PROGRAM MGMT → Ukpeagvik Inupiat Corporation · FY2023 contract”) and flutters a stat. Nobody else can honestly make this page — the connections are Cedar’s work.

WHAT MOVES

The constellation breathes; pulses fire down edges every ~2s; the ticker and stat flutters follow each pulse.

WHAT IT NEEDS

Nothing new to ship truthfully; a “recently resolved” feed makes it fully live.

THE RISK

Abstract — a skimming visitor may need the ticker to grasp what the graph is saying.

DIRECTION C

The Rising Curve

CHEAPEST TO MAKE FULLY REAL

The light, editorial one. A full-screen area chart sweeps FY2000 → today on load and the \$176.7B **rides the end of the curve, counting up as it draws**. Supporting stats run as a band along the bottom; “LATEST RELEASE” pulses at the tip. The wow is time depth: twenty-five years, maintained. The curve shape here is illustrative — production draws the real fiscal-year series, the only data ask.

WHAT MOVES

The curve draws itself over ~2.5s with the figure counting up alongside; band stats flutter on releases.

WHAT IT NEEDS

One series: contracting dollars by fiscal year (additive firm-grain family).

THE RISK

Reads closest to a conventional fintech hero; distinctiveness rests on the copy and the sweep.
