

LUMECON

CEDAR PRESS • LANDING PAGE REVIEW

Four front doors for Cedar Press.

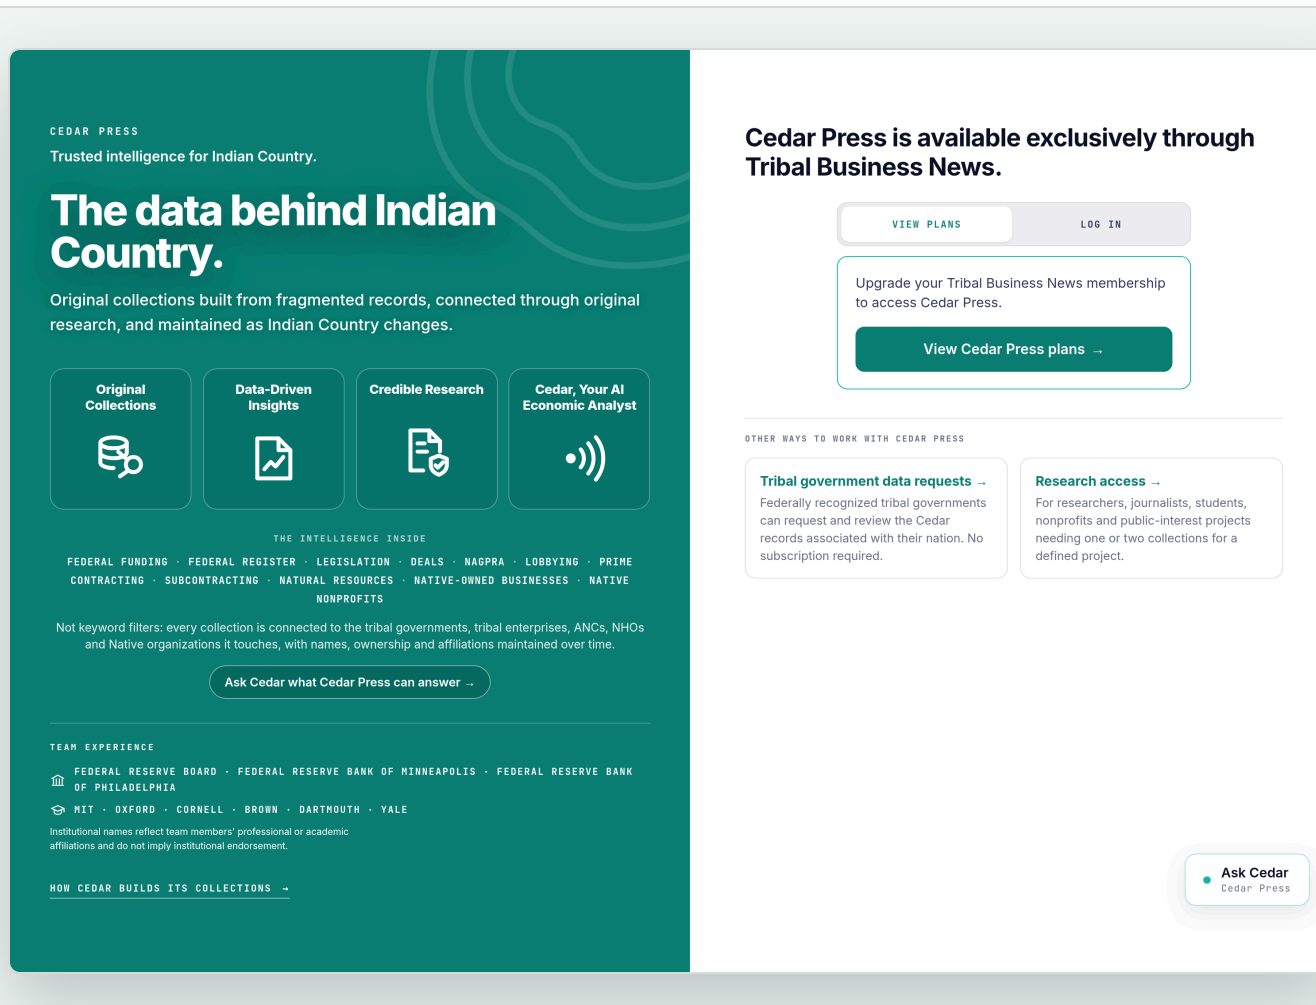

Where the landing page is today, and three directions for what it could become. The stills that follow do not move. **Every concept is a working animated page**, so read each one's "what moves" line as part of the design.

DRAFT FOR DISCUSSION • SEPTEMBER 2026 • CEDAR PRESS, BUILT BY LUMECON

WHERE IT IS TODAY

The current door

The live site as it stands, the full page. Four collections up front, the intelligence-inside list, both no-subscription paths (tribal data requests and research access), and the team-experience strip. A clean, proven layout, but the page **describes** the value rather than showing it. This is the baseline the three directions are trying to beat.

\$176.7B

CONTRACTS TRACED, FY2000 ONWARD

\$24.4B

FEDERAL SUBAWARDS

3.5M

ASSISTANCE PAYMENTS

2,386

DEALS TRACKED

MAINTAINED RECORDS

DIRECTION A

The Ledger

THE DATA IS THE PAGE

Columns of **real records**, the Bowhead FY2023 contract, the Yurok forestry award, ONRR royalties and NAGPRA notices, drift slowly behind one enormous figure that cycles through the headline stats. A chip names each arrival (" +118 contract actions · just landed") and one row in the wall lights up as the record arriving. The feeling: standing at a window onto the ledger itself.

WHAT MOVES

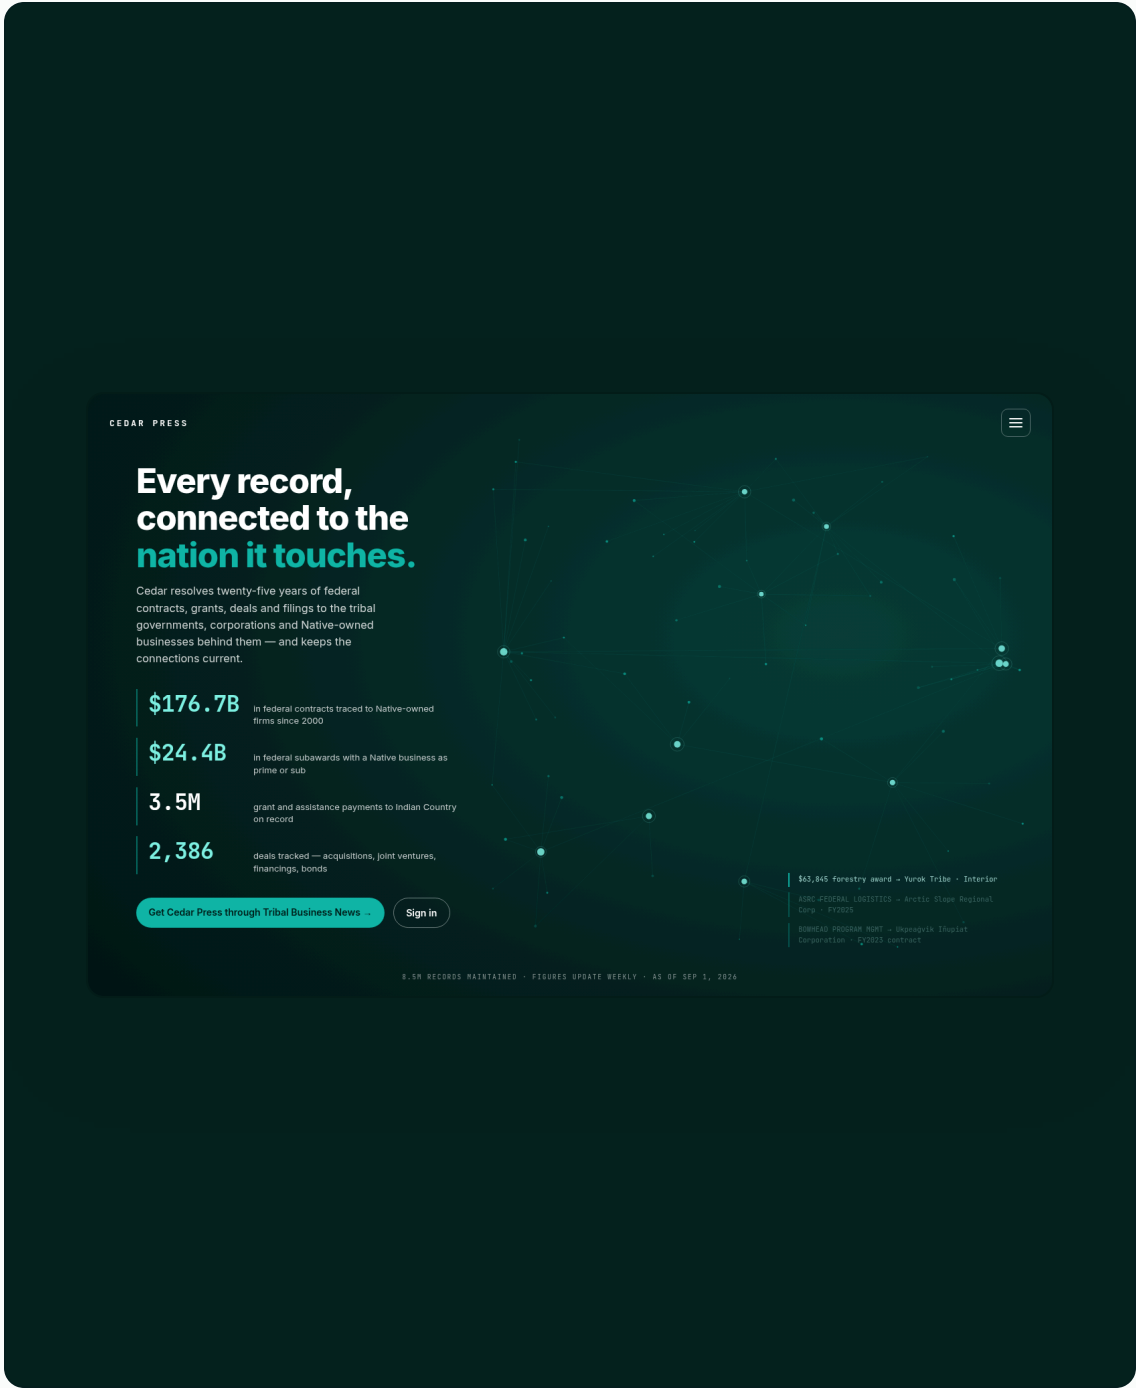

The record wall drifts; the big figure rolls digit-by-digit every ~5s; arrival chips pulse in.

WHAT IT NEEDS

A curated “recent rows” feed per release, under the same publishable-rows discipline as the data samples.

THE RISK

The wall must stay quiet or it fights the figure; opacity tuning is most of the work.

DIRECTION B

The Constellation

RECOMMENDED

The product’s core claim is entity resolution, so the hero **is the graph**: hub nodes are nations and corporations, small nodes are businesses and records, and a pulse traveling down an edge is a record being connected. Each pulse writes a plain-language line into the side ticker (“BOWHEAD PROGRAM MGMT → Ukpagaŋvik Iñupiat Corporation · FY2023 contract”) and flutters a stat. Nobody else can honestly make this page, because the connections are Cedar’s work.

WHAT MOVES

The constellation breathes; pulses fire down edges every ~2s; the ticker and stat flutters follow each pulse.

WHAT IT NEEDS

Nothing new to ship truthfully; a “recently resolved” feed makes it fully live.

THE RISK

Abstract: a skimming visitor may need the ticker to grasp what the graph is saying.

DIRECTION C

The Rising Curve

CHEAPEST TO MAKE FULLY REAL

The light, editorial one. A full-screen area chart sweeps FY2000 → today on load and the \$176.7B **rides the end of the curve, counting up as it draws.** Supporting stats run as a band along the bottom; “LATEST RELEASE” pulses at the tip. The wow is time depth: twenty-five years, maintained. The curve shape here is illustrative; production draws the real fiscal-year series, which is the only data ask.

WHAT MOVES

The curve draws itself over ~2.5s with the figure counting up alongside; band stats flutter on releases.

WHAT IT NEEDS

One series: contracting dollars by fiscal year (additive firm-grain family).

THE RISK

Reads closest to a conventional fintech hero; distinctiveness rests on the copy and the sweep.
